Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Prerequisites:

- II stopnja naravoslovno-tehniške smeri
- osnovna znanja iz področja računalništva in teorije obdelave signalov

- Second level degree from a natural sciences or engineering program,
- Basic knowledge of computer science and signal processing

Vsebina:

Content (Syllabus outline):

<u>Predavanja:</u> <ul style="list-style-type: none"> - Slike in človeški vid, - Vzorčenje slik, - Kamere in slikovni senzorji, - Spektralna občutljivost, - Kvaliteta slik, - Obdelava slik, - Analiza slik, 	<u>Lectures:</u> <ul style="list-style-type: none"> - Pictures and human vision, - Sampling of images, - Cameras and imaging sensors, - Spectral sensitivity - The quality of images, - Image processing, - Image Analysis,
--	--

<ul style="list-style-type: none"> – Klasifikacija in razpoznavanje objektov, – Zajem in obdelava globinskih slik, – Prikaz slik, – Uporabniški vmesniki. <p><u>Laboratorijske vaje in samostojno delo:</u></p> <ul style="list-style-type: none"> – Poglobitev teoretičnih znanj s področja obdelave slik na praktičnem primeru izbire, uporabe, evaluacije, ali načrtovanja sistema za obdelavo slik. 	<ul style="list-style-type: none"> – Classification and object recognition, – Acquisition and processing of depth images, – Image presentation, – User interfaces. <p><u>Laboratory work and individual work:</u></p> <ul style="list-style-type: none"> – Implementation of the theoretical knowledge in a specific application comprising selection, use, evaluation or design of an image processing system.

Cilji in kompetence:

<p>Cilji</p> <p>Predmet je namenjen pridobitvi osnovnih znanj in orodij, potrebnih za razvoj metod in sistemov ter praktičnih znanj pri razvoju algoritmov za zajem, obdelavo, razpoznavo slik in objektov na sliki. Program je usmerjen v tri glavne cilje: postaviti cilje obdelave in razpoznavanja, uporabiti primerne postopke in orodja ter nazadnje poznati postopke verifikacije doseženih ciljev. Predavanja so usmerjena v koncepte obdelave razpoznavanja in klasifikacije, kot tudi v funkcionalnost in uporabnost programskih orodij in naprav za zajemanje slik.</p> <p>Kompetence</p> <p><i>Učna enota prispeva k razvoju naslednjih splošnih in specifičnih kompetenc:</i></p> <ul style="list-style-type: none"> – sposobnost uporabe pridobljenega

Objectives and competences:

<p>Objectives</p> <p>The course provides basic knowledge and tools needed to develop methods, systems and algorithms for capturing and processing of images as well as recognizing objects in an image. The program focuses on three main objectives: to set goals for image processing and object recognition, to use appropriate procedures and tools to achieve these goals, and finally to be able to verify the achieved objectives. Lectures are focused on the concepts of image processing recognition and classification, as well as the functionality and usability of software and hardware for capturing images.</p> <p>Competences</p> <p><i>Learning Unit contributes to the development of generic and specific competences:</i></p> <ul style="list-style-type: none"> – the ability to apply theoretical knowledge in practice,

<p>teoretičnega znanja v praksi,</p> <ul style="list-style-type: none"> – sposobnost načrtovanja preprostih postopkov obdelave slik, – sposobnost sodelovanja pri razvoju inteligentnega razpoznavanja in klasifikacije objektov na sliki , – sposobnost izbire primernih naprav za zajemanje slike in primernih postopkov za obdelavo slike pri reševanju specifičnega problema. 	<ul style="list-style-type: none"> – ability to design simple image processing algorithms, – the ability to collaborate in the development of intelligent recognition and classification of objects in the picture, – the ability to select the appropriate hardware for image capturing and appropriate image processing procedures needed to solve a specific problem.
--	---

Predvideni študijski rezultati:

Intended learning outcomes:

<p>Znanje in razumevanje: <i>Študent/študentka:</i></p> <ul style="list-style-type: none"> – pozna naprave in postopke za zajemanje slik, – pozna programska orodja in osnovne postopke za obdelavo slike, – pozna postopke za analizo slik in razpoznavanje objektov na slikah, – zna oceniti zmogljivosti, prednosti in omejitve strojne in programske opreme za zajemanje in obdelavo slik, – lahko sodeluje pri razvoju sistemov, ki vsebujejo zajemanje in obdelavo slik. 	<p>Knowledge and understanding: <i>Student:</i></p> <ul style="list-style-type: none"> – is familiar with systems and methods for capturing images, – is familiar with software tools and basic image processing procedures, – is familiar with the image analysis procedures and object recognition algorithms, – is able to assess the capabilities, strengths and limitations of the hardware and software for image capturing and processing, – can participate in the development of systems incorporating image acquisition and processing.
---	--

Metode poučevanja in učenja:

Learning and teaching methods:

<ul style="list-style-type: none"> – predavanja z aktivno udeležbo študentov, ki vsebujejo razprave, diskusije, odgovore na vprašanja in prikaz praktičnih primerov, – laboratorijske vaje in/ali individualno in skupinsko delo s študenti v obliki konzultacij, – projektna naloga s praktičnim primerom implementacije inteligentnih senzorjev. 	<ul style="list-style-type: none"> – lectures with active participation of students, including discussions, debates, answers to questions and practical examples, – laboratory work and/or individual and group work with students in the form of consultations, – seminar with practical examples of the implementation of intelligent sensors.
---	---

Načini ocenjevanja:

**Delež (v %) / Assessment:
Weight (in%)**

<ul style="list-style-type: none"> – projektna naloga – teoretični del izpita 	<p>(50%) (50%)</p>	<ul style="list-style-type: none"> – seminar project – theoretical examination
